

Energy Usage (kWh)

Determine the top 6 electrical items you use on a regular basis during the week. List the items, their power rating (*somewhere on the item or box – may have to find a reasonable value from the web*) and the approximate time per week you use it. Calculate the kilowatt hours and cost of usage associated with each item.

Current Average Price per kWh: **\$ 0.12**

Appliance	Power Rating	Usage (/week)	kWh	Cost (/week)

What would be the monthly fee for just these 6 items?
